

## Self Management

I did an outstanding job on the Awesome project. I have been investing at least 3 hours of time on a weekly basis to produce a product that meets the original, unchanged proposed plan, which I considered to be challenging and ambitious. Report could be found [here](#).

In addition, I have been self driving by giving more variety of answers to weekly tasks where hundreds of students have been giving the same answer. Hence I took additional time to do a search and found something that is different to the rest.

<https://www.openlearning.com/unswcourses/courses/sec-2020/authentication?inCohort=unswcourses%2Fcourses%2Fsec-2020%2FCohorts%2FClassOf2020#comment-5e5e5bd230e4ad3a703f507c>

The screenshot shows a web browser window displaying an OpenLearning course page. The browser's address bar shows the URL: <https://www.openlearning.com/unswcourses/courses/sec-2020/authentication/>. The page features a sidebar on the left with navigation links: Home, Job Application, Exam Central, Music, happy at home, Weekly Schedule - useful links, Uni at Home, Weekly Activities, Extended Activities, Course Feed, Security Everywhere, Join a group, and Course Information. The main content area displays a discussion thread. A post by Pei Wang, dated 'about a month ago', is visible. The post content discusses OAuth and includes a link to a Medium article: <https://medium.com/oauth-2/why-you-should-stop-using-the-oauth-implicit-grant-2436ced1c926> and a link to an IETF draft: <https://tools.ietf.org/draft-ietf-oauth-security-topics-10.html#rfc-section.3>. A preview box for the Medium article is shown, titled 'Why you should stop using the OAuth implicit grant!' by Torsten Lodderstedt, dated Nov 9, 2018. The preview text states: 'No one should any longer use the implicit grant! That's what IETF's OAuth working group, the authority for official OAuth specifications...'. The article content in the preview box is: 'OAuth 2.0 Security Best Current Practice. This document describes best current security practice for OAuth 2.0. It updates and extends the OAuth 2.0 Security Threat Model to incorporate practical experiences gathered since OAuth 2.0 was published and covers new threats relevant due to the broader application of OAuth 2.0.' The page also shows a 'You are Awesome!' notification in the top right corner and a search bar at the top.

I have also been making consistent effort in posting blogs to reflect my learning progress as elaborated in the security mindset page.

This also include blogs on tutorials and lectures:

## **Tutorial reflections**

I am a major contributor in tutorial discussions. Below reflections contains noted I took from the discussions. You may comparing it against the final class note to see the proportion I have done is likely ~50% of my subgroup (normally with 3+ members ).
