

## **Working With Others**

### **An active member in the tutorial class**

I started to become more active starting from week3. After the lock down, I always have my camera on during tutorial sessions.

In week 3, I explained with another class member in front of the class during the tutorial about how to calculate an answer for a weekly activity task [bits of penguin](#) early in the term.

In week 4 during class discussion of the study case, I explained the application of public and Private key to my group which generated a visual artifact of how it works. I learned this as a preparation for interviews a couple of years ago. I explained the topic with my best effort. I am very glad that the course eventually covers the topic properly.

In week5 as recorded in the blog post, I contribute to 90% of ideas and note taking in my group this week. I step up when the group consists of more shy members.

I prepared for the case study in week 7. I was the first coming up with an answer during a tutorial activity as recorded in my comment in the screenshot recorded.

Knowledge about RSA became relevant again in week 8. This time I applied with what I learned in week 4 and drew a diagram to the sub discussion group on the study case. The diagram was crude but well received.

I presented my Awesome project. I also showed interested in other's project by asking questions.

### **Commenting in weekly tasks**

I also occasionally post comments in weekly tasks to help others. My comment is still visible from the link below. Others have been buried.

### **Twitter posts**

I also made a small effort posting on twitter which got limited reception
